# **Getting Started with: PowerPoint**

Handouts available at glensidepld.org/technology

**PowerPoint** is electronic presentation software used to create slides. When you first open it, you'll typically see the Start screen, which shows your recently opened presentations and a host of available themes to use to create a new presentation.

You can also choose themes from the gallery on the **Design tab** while working on a presentation.

NOTE: It's suggested that you decide on a theme before adding content because changing themes may cause existing content to behave strangely.

Themes											

Here is a new **Blank Presentation**, which opens with one slide; a **Title Slide**. The **Ribbon** is the user interface for PowerPoint, and the **Home Tab** is currently open. Notice that the blank title slide has two **Text Placeholders**, where you can click to add a title and/or a subtitle.

Notice also on the left the **Slide List** where we will see **thumbnail** views of all our slides. Currently the thumbnail is blank because we haven't yet added a title or subtitle. Every time we add a new slide, a thumbnail will appear in the Slide List.

Text Placeholders: You add text to PowerPoint using text boxes; you cannot just type on the slide.

Picture: Images that come from your computer, flash drive, or online.

Animation: The way text or images appear on a slide during a presentation.

Transition: Special effects (sound and/or visual) that appear between slides.

Notes: for the presenter (not visible to the audience).

**View Modes** include: Normal (seen here, best for editing); Slide Sorter (for arranging your "slide deck"); Reading View (best for proofreading); and Slide Show (how you will show your presentation).

# Add a New Slide

#### **Insert Text - Text Boxes**

## **Insert Images**

#### **Add Transitions**

#### **Transitions** are effects that can be applied as you move from one slide to the next.

## **Add Animations**

**NOTE**: Use Transitions and Animations sparingly: they can be distracting.

#### **View Slide Show**

#### Presentation Tools in PowerPoint

#### Adding Notes

**Notes** can be helpful when giving a presentation. You can add notes related to different slides in PowerPoint. The notes are for the presenter — the audience won't see them.

#### Other Presentation Software

There are other programs you can use for creating presentations besides PowerPoint. Google Slides, Canva, Prezi, and Keynote are popular programs but there are others available online.
